The time period for reply, if any, is set in the attached communication.

## DETAILED ACTION

### *Response to Amendment*

This Office Action has been issued in response to the amendment filed on July 11<sup>th</sup>, 2008. Claims 1-15 and 34 are pending; claims 16-33 have been cancelled and claim 34 is new. Applicant's arguments have been carefully and respectfully considered.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Amro et al (US Patent 6,950,861) in view of Bates et al (US Patent 5,877,766).

With respect to claim 1:

Amro teaches:

**A method to identify a previously visited URL in results from a search, comprising:**

**Loading a URL personal databook collection object in response to receiving the results of a network search by the search engine, (Column 3 Lines 15-19, discloses accessing the bookmarks (databook collection object) after receiving a search term) wherein the URL personal databook collection object comprises URL references that have been previously visited by a user and selectively saved in**

**the URL personal databook collection object by the user;** (Column 2 Lines 15-16, discloses that the bookmarks store a URL of a site that the user wants to store reference to)

**Presenting all search results that satisfy the at least one search term including any URL references that have been previously visited by the user and selectively saved in the URL personal databook collection object by the user and including any URL references that satisfy the at least one search term but have not been previously visited by the user and therefore have not been saved in the URL personal databook collection object; and** (Column 3 Lines 36-44, discloses presenting other results, which are the web pages that are not stored in the user's bookmarks, and the bookmark results for said search term)

**Identifying any matches between results from the search and any URL object references of previously visited URLs in the URL personal databook collection object.** (Column 3 Lines 42-44, discloses identifying the bookmark results)

Amro does not appear to explicitly disclose **a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object.**

Bates teaches **a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object.** (Column 25 Lines 38-40, discloses a user being able to enter a comment about a document which includes the description of said document)

It would have been obvious for one of ordinary skill in the art at the time of the invention to combine the teachings of said references to implement **a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object** because this facilitate a user to remember why said document or website is important to them.

With respect to claim 2:

Amro teaches **comparing the results from the search to any URL object references in the URL personal databook collection object to identify any matches.** (Column 3 Lines 36-46, discloses comparing the results so that the bookmark results can be identified)

With respect to claim 3:

Amro teaches **visually identifying any matches in the results from the search.** (Column 3 Lines 42-44, discloses identifying the bookmarked results)

With respect to claim 4:

Amro teaches **visually identifying any matches by at least one of a predetermined icon, a predetermined text font and highlighting.** (Column 3 Lines 42-44, discloses that the bookmark results are going to be highlighted)

With respect to claim 5:

Bates teaches **presenting the saved comment associated with any match only in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved comment is presented as a balloon from the associated match on a page displaying the search results.** (Column 25 Lines 33-41, discloses that a comment made of a document can be presented to the user as a balloon when the pointer is positioned in said document)

With respect to claim 6:

Amro teaches **selecting any results from the search containing content of interest for future reference.** (Column 3 Lines 44-46, discloses that the user is going to be able to select any of the results)

With respect to claim 7:

Amro teaches **storing only search results selected by a user in the URL personal databook collection object.** (Column 2 Lines 15-16, discloses that the user is the one that stores websites that are of interest to him in the bookmarks)

With respect to claim 8:

Amro teaches **storing the selected search results comprises storing a URL reference.** (Column 2 Lines 15-16, discloses that the selected web pages are stored including its URL reference)

With respect to claim 9:

Amro teaches **storing the URL reference as a serialized object.** (Column 2 Lines 15-16, discloses that the selected web pages are stored including its URL reference)

With respect to claim 10:

Bates teaches **storing any comments in association with the stored search results.** (Column 25 Lines 39-41, discloses storing user entered information including title or description)

With respect to independent claim 11:

Amro teaches:

**A method to identify a previously visited URL in results from a search, comprising:**

**Entering at least one search term in a search engine;** (Column 2 Lines 59-60)

**Comparing the results from a network search by a search engine to any URL object references of previously visited URLs in a URL personal databook**

**collection object; and** (Column 3 Lines 36-44, discloses presenting other results, which are the web pages that are not stored in the user's bookmarks, and the bookmark results for said search term)

**The URL personal databook collection object comprises URL references that have been previously visited by a user and selectively saved in the URL personal databook collection object by the user;** (Column 2 Lines 15-16, discloses that the bookmarks store a URL of a site that the user wants to store reference to)

**Visually identifying any matches between the results from the search and any URL object references in the URL personal databook collection (profile) object.** (Column 3 Lines 42-44, discloses identifying the bookmark results)

Amro does not appear to explicitly disclose **a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object.**

Bates teaches **a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object.** (Column 25 Lines 38-40, discloses a user being able to enter a comment about a document which includes the description of said document)

It would have been obvious for one of ordinary skill in the art at the time of the invention to combine the teachings of said references to implement **a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook**

Art Unit: 2167

**collection object** because this facilitate a user to remember why said document or website is important to them.

With respect to claim 12:

Amro teaches **loading the URL personal databook collection object in response to presenting the results from the search.** (Column 3 Lines 15-19, discloses accessing the bookmarks (databook collection object) after receiving a search term)

With respect to claim 13:

Bates teaches **presenting any saved or captured comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in results from the search, wherein the saved or captured comments are presented on a page displaying the search results.**

(Column 25 Lines 36-41, discloses presenting the comments of a document when the pointer device is positioned over it)

With respect to claim 14:

Amro teaches **selecting any results from the search containing content of interest for future reference in response to no matches; and** (Column 3 Lines 44-46, discloses that the user is going to be able to select any of the results)

**Storing any selected search results in the URL personal databook collection object.** (Column 2 Lines 15-16, discloses that the selected web pages are stored including its URL reference)

With respect to claim 15:

Bates teaches **presenting a dialogue box to enter comments related to any stored search results; and storing and selected search results in the URL personal databook collection object.** (Column 25 Lines 36-41, discloses that a user can store comments for each file)

With respect to independent claim 34:

Amro teaches:

**A method to identify a previously visited URL in results from a search, comprising:**

**receiving results from a search of websites on a network corresponding to at least one search term, wherein only the at least one search term is entered by a user and only the at least one search term is used by a search engine to perform the search;** (Column 3 Lines 36-38)

**loading a URL personal databook collection object only after receiving the results of the network search by the search engine,** (Column 3 Lines 15-19, discloses accessing the bookmarks (databook collection object) after receiving a search term) **wherein the URL personal databook collection object comprises URL references that have been previously visited by a user and selectively saved in the URL personal databook collection object by the user;** (Column 2 Lines 15-16, discloses that the bookmarks store a URL of a site that the user wants to store reference to)

**presenting all search results that satisfy the at least one search term including any URL references that have been previously visited by the user and selectively saved in the URL personal databook collection object by the user and including any URL references that satisfy the at least one search term but have not been previously visited by the user and therefore have not been saved in the URL personal databook collection object;** (Column 3 Lines 36-44, discloses presenting other results, which are the web pages that are not stored in the user's bookmarks, and the bookmark results for said search term)

**identifying any matches between results from the search and any URL object references of previously visited URLs in the URL personal databook collection object; and**(Column 3 Lines 42-44, discloses identifying the bookmark results)

Amro does not appear to explicitly disclose **a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL**

**reference was stored in the URL personal databook collection object; presenting the saved comment associated with any match only in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved comment is presented as a balloon from the associated match on a page displaying the search results.**

Bates teaches **a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object;** (Column 25 Lines 38-40, discloses a user being able to enter a comment about a document which includes the description of said document) **presenting the saved comment associated with any match only in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved comment is presented as a balloon from the associated match on a page displaying the search results.** (Column 25 Lines 33-41, discloses that a comment made of a document can be presented to the user as a balloon when the pointer is positioned in said document)

It would have been obvious for one of ordinary skill in the art at the time of the invention to combine the teachings of said references to implement **a comment, associated with each URL reference, entered and saved by the user to indicate a reason why each URL reference was stored in the URL personal databook collection object; presenting the saved comment associated with any match only in response to positioning a computer pointing device on a selected visually**

**identified match in the results from the search, wherein the saved comment is presented as a balloon from the associated match on a page displaying the search results** because this facilitate a user to remember why said document or website is important to them.

### ***Response to Arguments***

The following is in response to the arguments filed on July 11<sup>th</sup>, 2008.

### ***Claim Rejections - 35 USC § 103***

With respect to claim 1:

Applicant argues “**Amro does not teach or suggest loading a URL personal databook collection object in response to receiving the results of a network search**”. Examiner respectfully disagrees. Amro (Column 4 Lines 2-11 and Fig.4 Elements 412-418) disclose that the bookmarks are searched for the search terms after the web search has been executed. Therefore the web search is done before bookmark information is used (loaded) to search for the search terms.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mariela D. Reyes whose telephone number is (571) 270-1006. The examiner can normally be reached on M - F 7:30- 5:00 East time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Cottingham can be reached on (571) 272-7079. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
